Concurrent Programming
COMP 409

McGill University, Winter 2017

Course Details

Time: Wednesday, Friday 11:35–12:55
Place: ENGTR 1090

Instructor: Professor Clark Verbrugge
Office: McConnell Eng., room 230
Office hours: Monday 13:00-14:30, Friday 10:00–11:30, or by appointment.
Phone: 514 398-2411
Email: `clump@cs.mcgill.ca`

Teaching Assistant: Hanfeng Chen
Office: MC234
Office hours: TBA
Email: `hanfeng.chen@mail.mcgill.ca`

Teaching Assistant: Shruti Bhanderi
Office: TBA
Office hours: TBA
Email: `shruti.bhanderi@mail.mcgill.ca`

Email, Website

McGill's MyCourses will be used for course announcements, to manage assignments and for online discussions. Students are expected to monitor their McGill email account for course-related news and information.
The external course website is: `http://www.sable.mcgill.ca/~clump/comp409`

Pre-requisites

- COMP 251 (Data Structures and Algorithms).
- COMP 302 (Programming Languages and Paradigms).
- COMP 310 (Computer Systems and Organization) *or* ECSE 427 (Operating Systems).
- There is a non-trivial programming requirement; ability to program in C and Java will be required.

Students registering without the pre-requisite may find the course removed from their transcript by their Faculty. Please consult the instructor if you do not have all the pre-requisites.

Textbooks

The following texts, along with your own course notes constitute reference sources for this course.

- Maurice Herlihy and Nir Shavit. *The Art of Multiprocessor Programming* (revised 1st edition).
  This is the primary text for the course. It does not cover all topics, but it is a good and relatively modern reference. It is available at the bookstore as a physical book, and in the library in e-book form.

- Gadi Taubenfeld. *Synchronization algorithms and concurrent programming.*
  A previously used text; it does not cover the same material, but it provides a different perspective.

- Brian Goetz et al.. *Java concurrency in practice.*
  An old, but still relevant practice-oriented text for Java programming

- Gregory Andrews. *Foundations of Multithreaded, Parallel, and Distributed Programming.*
  An ancient text, but a classic one; covers some of the basics.

Evaluation

4 Assignments:	40%
Midterm:	10%
Exam:	50%

The exam will be open-book. A supplemental exam (50%) will be held if required.
In accord with McGill University's Charter of Students' Rights, students in this course have the right to submit in English or in French any written work that is to be graded.

Assignment and Exam Policy: Assignments must be submitted on time. Late assignments will only be accepted in highly-exceptional circumstances, typically requiring a medical note as well explicit permission from the instructor. Note that I do not consider your workload in other courses exceptional, no matter what courses you take! No assignment submissions will be accepted after marked assignments have been returned, or after solutions have been discussed.
McGill University values academic integrity. Therefore all students must understand the meaning and consequences of cheating, plagiarism and other academic offenses under the Code of Student Conduct and Disciplinary Procedures (see `http://www.mcgill.ca/integrity/` for more information).
In all cases, to be accepted **work submitted for this course must fully and completely represent your own efforts.** Copying assignments or tests, or allowing others to copy your work, whether whole or partial will not be tolerated.

Course Content

Note that lecture dates are approximate: topics may shift and/or span lectures.
Chapter(.section) readings from Herlihy and Shavit are shown next to topics

Lec#	DoW	Date	Topic	Readings
1	**Wednesday**	**January 4**	Introduction	**1**
2	**Friday**	**January 6**	Hardware, atomicity	**B.2–B.5, B.7**
3	**Wednesday**	**January 11**	Mutual exclusion, Java/PThreads	**2.1–2.3, A.2.1, A.4**
4	**Friday**	**January 13**	Simple locks	**2.4–2.6, 7.1–7.4**
5	**Wednesday**	**January 18**	Complex locks	**7.5, 8.1–8.5**
6	**Friday**	**January 20**	Termination, barriers, priority, TSD	**17.1–17.6, A.2.4**
7	**Wednesday**	**January 25**	Deadlock, race conditions	
8	**Friday**	**January 27**	Expressiveness	**4.1, 4.2, 5.1, 5.2**
9	**Wednesday**	**February 1**	Linearizability, scheduling	**3.1–3.6**
10	**Friday**	**February 3**	Hardware memory consistency	**3.8**
11	**Wednesday**	**February 8**	Memory models: Java	
12	**Friday**	**February 10**	Memory models: C++	
13	**Wednesday**	**February 15**	Concurrent data structures	**6.1–6.4, 10.1–10.6, B.8**
14	**Friday**	**February 17**	**Midterm (TBC)**	
15	**Wednesday**	**February 22**	Concurrent data structures	**11.1–11.4, 9.8**
16	**Friday**	**February 24**	OpenMP	
17	**Wednesday**	**March 8**	SPMD and PGAS	
18	**Friday**	**March 10**	Work stealing	**16.1–16.5**
19	**Wednesday**	**March 15**	Transactional memory	**18.1–18.4**
20	**Friday**	**March 17**	Message-passing	
21	**Wednesday**	**March 22**	TBD	
22	**Friday**	**March 24**	Process algebra	
23	**Wednesday**	**March 29**	Process algebra	
24	**Friday**	**March 31**	Dataflow	
25	**Wednesday**	**April 5**	Dataflow	
26	**Friday**	**April 7**	Review	

Assignments

Expected assignment distribution dates and due dates are listed below. Note that this is mainly to help you in general planning; topic descriptions are vague and non-exhaustive, and both the topic and the associated dates may change. Be sure to consult MyCourses for final, official due dates.

Assig.	Main Topic	Available	Due
1	Basic concurrency and locking	Tuesday, January 17	Tuesday, January 31
2	Thread interaction and coordination	Tuesday, January 31	Tuesday, February 14
3	Concurrent data structures	Tuesday, March 7	Tuesday, March 21
4	High-level concurrency	Tuesday, March 21	Tuesday, April 4
